SUMMARY

A people-oriented software engineer with a strong focus on building positive relationships and leveraging unique talents to drive team success. Seeking new challenges to further develop skills and expertise.

EDUCATION

Bachelor of Science in Computer Science | George Fox University, Newberg OR

Outstanding Computer Science Student Award | Honors Program | Dean's List | CSIS Student Advisory Board

TECHNICAL SKILLS

Languages: Python, Java, Scala, JavaScript, TypeScript, C, C++, C#, PHP

Frameworks: React, Bootstrap, TailwindCSS, SpringBoot, MVC

Databases: SQL (Postgres, Oracle, MySQL)

Distributed & Parallel Computing: MPI, CUDA

DevOps & Infrastructure: Docker, Terraform, Terragrunt, Ansible, Jenkins, GitLab Runners

Cloud: AWS (EC2, Elastic Beanstalk, RDS, S3, ElasticCache, IAM, Cloudwatch, Inspector)

Concepts: Data structures & algorithms, object-oriented design, system design, distributed systems, machine learning

EXPERIENCE

Software Engineer | SAIC | Remote | July 2024 – Present

- Maintained all prior full-stack and AWS/DevOps responsibilities while leading new efforts in platform migration and security remediation.
- Built a multi-cloud Splunk SIEM environment using Terraform, Terragrunt, and Ansible, enabling automated deployment and configuration of log ingestion pipelines across AWS, Azure, GCP, and OCI
- Developed Python scripts to automate document refactoring and code generation, supporting data ingestion and reducing repetitive engineering tasks.
- Delivered full-stack development, maintenance and consulting for a Java-based application serving over **10,000 daily users**.
 - Collaborated within a three-person team to execute a major platform upgrade, which involved extensive package and dependency replacement, a complete frontend migration and testing across a codebase of over **195,000 lines of code**.
 - Led client meetings and provided progress reports and technical guidance for issue resolution, system functionality, and upcoming development efforts through Jira software.
 - Identified, investigated, and resolved security vulnerabilities across both the infrastructure and application codebase, contributing to overall system hardening and improved security posture

Software Engineer Associate | SAIC | Remote | November 2023 – July 2024

- Developed, designed and maintained a full-stack application (Java, SpringBoot, TypeScript, NextJS, TailwindCSS, Docker) that utilized cloud technology (AWS, Elastic Beanstalk, Jenkins) and DevOps (Terraform, Ansible) for agile deployment and enhanced reliability.
 - Improved frontend performance and accessibility through component refactoring and modern UI patterns.
 - Engineered administrative tools that enabled managers to query, update and analyze content and user data across 800,000+ unique entries.
 - Migrated the platform from Amazon Linux 2 to Amazon Linux 2023 to ensure full compliance with security protocols and best practices.

Computer Support Specialist | George Fox University | Newberg, OR | June 2023 – November 2023

- Diagnosed and resolved software/hardware issues on Windows and macOS computers to ensure full functionality, customer satisfaction and adherence to industry standards either in person, over the phone or through a remote connection.
- Resolved campus-wide CPU throttling issues on Windows 11 machines by identifying the causes and implementing both manual and automatic solutions.
- Enhanced efficiency by implementing automated file transfers through PowerShell scripts, reducing required employee oversight.

Software Development Intern | Columbus Systems | Tumwater, WA | June 2022 – Jan. 2023

- Developed a cross-platform full-stack mobile application for iOS and Android (Delphi, Paradox) that allowed service employees to query a customer database, navigate to residences and record duties performed.
- Led Amazon Appstore deployment, managing production builds, metadata setup and release cycles.
- Eliminated redundant pen and paper tasks, leading to a substantial increase in employee productivity.

Senior Capstone | George Fox University | Newberg, OR | August 2022 – April 2023

- **Reduced user-intervention by 75%** by adding autonomous-turning and adaptive cruise control to a vineyard rover using Python, C, ROS, computer vision and machine learning.
- **Increased predicted yield accuracy from 72% to ~98% accuracy** by rectifying terabytes of misclassified images in a Postgres database via a Hidden Markov machine learning model.

Lab Assistant | George Fox University | Newberg, OR | September 2021 – April 2023

- Mentored and guided students in mastering core Computer Science concepts such as application development, data structures, analysis of algorithms, relational databases, software engineering methodologies and programming best practices.
- Provided emotional and academic assistance to struggling students by devising better study habits and cultivating increased career preparedness.

CERTIFICATIONS

Azure Fundamentals | January 2026

- Demonstrates foundational knowledge of cloud concepts, core Azure services, plus Azure management and governance features and tools.

CompTIA Security Plus | November 2023

- Validates the baseline skills necessary to perform core security functions and pursue an IT security career.

Amazon Web Services Cloud Practitioner | September 2023

- Validates foundational, high-level understanding of AWS Cloud, services, and terminology
